# **Device DCS Guidelines**

## **User Responsibilities**

#### What does the Device DCS cover?

Laptops, desktops, tablets, smartphones, flash drives and other portable storage drives used for work purposes regardless of ownership.

### What do I need to do to comply?

- **Step 1:** Determine which data classification level applies to the data on your device(s). See the DCS cheat sheet or the UM DCS definitions.
- Step 2: Inform your IT support staff of the DCS level that aligns with your device(s).
- **Step 3:** Your IT professional is responsible for ensuring your device(s) is deployed, configured and managed in accordance with the Device DCS.
- **Step 4:** You are responsible for the following:
  - o Keep portable devices physically secure.
  - o Lock your screen/device when not in use.
  - When connecting to your campus network or campus resources, use VPN or other secure remote access services as deemed appropriate by your campus IT department.
  - Do not share your password with anyone and do not use your University password on non-University web sites or other accounts.
  - o Put a PIN or pattern on portable devices such as your smartphone and iPad.
  - Make sure your device is disposed of properly. For University-owned devices, give your aged device to your IT support staff. For personal devices, make sure they are wiped before disposal.
  - o Do not disable the firewall or antivirus.
  - Use mapped network drives or collaboration applications provided by your campus to store work files rather than storing files exclusively on your workstation (protects against device failure).
  - Do not join unsecure wireless networks when working or, if you must use such networks, use VPN or other secure remote access services.
  - Report the loss or theft of a device, regardless of ownership, to your campus police department, your IT support person and to your campus <u>Information</u> <u>Security Office</u>.

## Additional steps you can take to secure devices both at work and at home:

• Do not make online purchases or other financial transactions over a publicly-available wireless network.

- Do not use a flash drive if you don't know where it came from (it could hold a virus).
- For personal devices, keep the operating system and applications current.
- Encrypt personal devices, including flash drives, that hold <u>DCL4 data</u>. If you own a device that can't be encrypted, you should not store DCL4 data on it.
- Do not download suspicious or obscure applications onto your computer and never click on links in emails.
- Use common sense and best practices when traveling, especially when <u>traveling overseas</u>.

**Note:** If your University-issued computer is not managed by an IT professional or if it uses a non-standard operating system such as Linux, consult with your campus IT division and/or with your campus Information Security Officer.

#### **DCL Cheat Sheet**

The creator/manager (e.g., data custodian) of information and data has the latitude to classify data at a level higher than the definitions below. However, data/information cannot be classified at a lower level than the definitions below unless approved by your **ISO**.

| DCL CHE            | DCL CHEAT SHEET GUIDELINES |                             |                                     |  |
