P&B 2002, Report #7

BooneL@umsystem.edu
(573) 884-3104

<http://www.system.missouri.edu/planning/planning>

Executive Summary

The *Market Position Report, 2002* examines the market position of the University of Missouri relative to other two and four-year post-secondary institutions in the state of Missouri and is divided into three major sections. The first part of this report examines changes in the landscape of higher education in Missouri in several key areas: a. undergraduate headcount at Missouri institutions; b. first-time freshman headcount by type of institution; c. predominate market share of undergraduate enrollment by type of institution; and d. enrollment patterns of underrepresented minorities. The second part of this report is an analysis of the undergraduate market share by Missouri county origin for the University of Missouri and its four campuses in 1990 and 2000. The last part of this report is composed of two appendices. Appendix A shows the change in market share of total undergraduate enrollment by Missouri county origin from 1990 to 2000. Appendix B is a summary of total undergraduate enrollment by Missouri county origin in 1990 and 2000. This report can be used to better understand the University of Missouri's competitiveness throughout the state of Missouri and sheds insight into the enrollment patterns of its undergraduates that come from the various geographical regions of Missouri.

The highlights of this report include:

- In 1990, the University of Missouri enrolled 18% of all undergraduates that attended either a four-year public, two-year public, or four-year private institution in Missouri, and enrolled 40% of all Missouri four-year public undergraduates. By Fall 2000, the University enrolled 17% of all post-secondary undergraduates in Missouri and enrolled 41% of all undergraduates that attended Missouri public four-year institutions.
- The University of Missouri continues to compete in a changing higher education landscape where more first-time freshmen in Missouri are choosing to attend two-year public and four-year private institutions.
- By Fall 2000, there was an increase in the number of Missouri counties where undergraduates primarily enrolled in either two-year public or four-year private institutions. This change was most noticeable in the northern half of Missouri.
- Although disparities exist between the urban and non-urban campuses, the University remains competitive in attracting traditionally underrepresented minority students. In Fall 2000, it enrolled 44% of all underrepresented minority students that attended Missouri four-year public institutions and 15% of all underrepresented students that attended college in Missouri.
- In both 1990 and 2000, the University enrolled undergraduate students from every county in the State of Missouri, although nearly 80% of its resident undergraduates came from three distinct geographical areas: Central Missouri, and the St. Louis and Kansas City metropolitan areas.
- The University does not have an overall "position" in the Missouri higher education market, but rather varying levels of competitiveness throughout the state. Each of the four campuses makes a unique contribution to the University's overall competitiveness in the State of Missouri.

Caveats

This report examines the post-secondary education market in Missouri and is limited to four-year public, two-year public and four-year private institutions. Two-year private institutions, which enroll less than 0.25% of all Missouri undergraduates are not considered. Neither are trade schools such as cosmetology, business, and automotive. In examining the overall higher education market, four-year public, two-year public, and four-year private institutions are the main competitors for undergraduate students in the state of Missouri.

Geographic origin is the legal residence of a student at the time of original admission to the institution. The legal residency of a student may change during enrollment at an institution, but the geographic origin will always remain the same. Throughout this report, market share is based on the geographic origin of the student and any reference to residency is based on the legal residence of a student at the time of original admission into college. This market position report is based on students of Missouri origin and does not include an analysis of students who gained Missouri residency status after admission to a Missouri institution.

St. Louis City is the only city in Missouri that is not part of a county. However, throughout this report, including the Missouri maps, it will be referenced as a county.

Thanks

A special thanks goes to Randy Sade and Elisa Day for their assistance in preparing the maps. They were also especially helpful in verifying the accuracy of the data found in the Appendices.

The Higher Education Market in Missouri, 1990-2000

The University of Missouri System currently competes with nine other four-year public, twenty-three four-year private and eighteen two-year public institutions in attracting a fraction of the nearly 250,000 undergraduates in Missouri. The table below shows that the University of Missouri has maintained a substantial portion of the undergraduate market but also illuminates a trend that threatens not only the competitiveness of the University but also the other four-year public institutions in Missouri.

**Undergraduate Headcount and Market Share of Missouri Institutions,
Fall 1990 to Fall 2000**

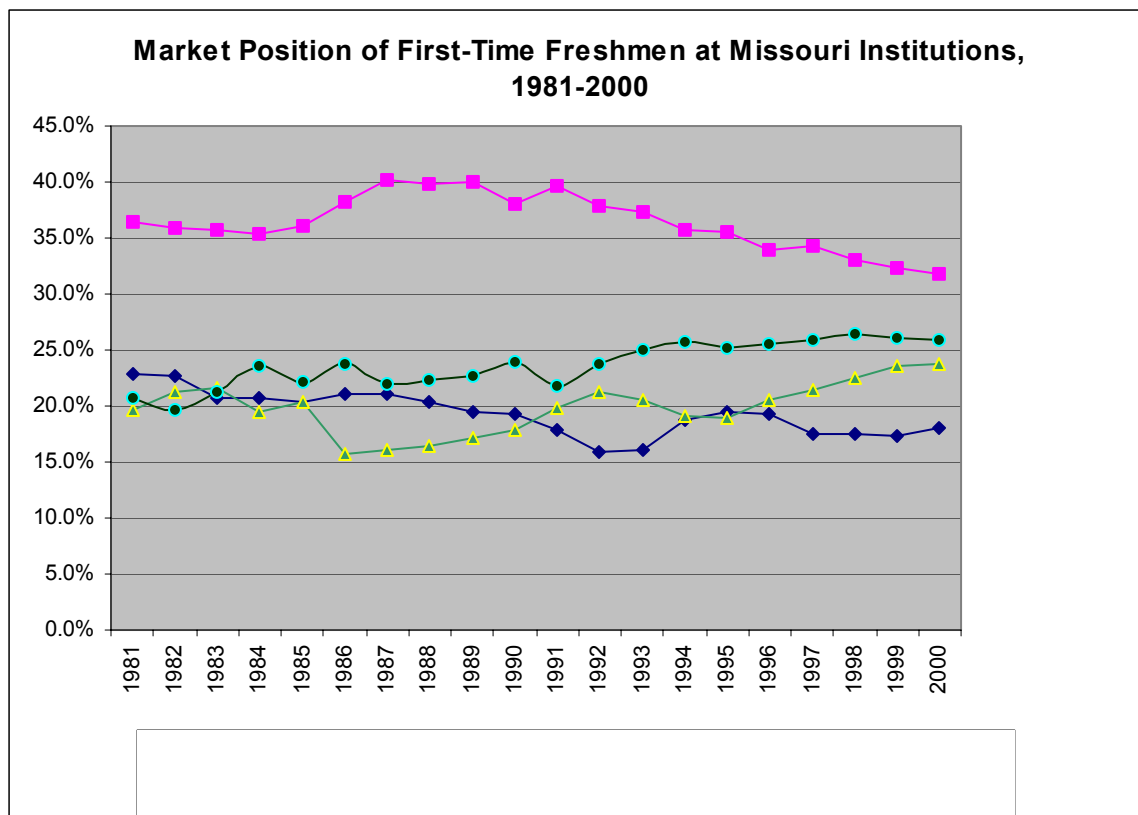

Total Undergraduates			% of Market		
Institution Type	1990	2000	% Change in Enrollment	1990	2000
UMC	18,763	18,058	-3.8%	8.1%	7.2%
UMKC	6,514	8,091	24.2%	2.8%	3.2%
UMR	4,221	3,698	-12.4%	1.8%	1.5%
UMSL	12,772	12,737	-0.3%	5.5%	5.1%
UM System	42,270	42,584	0.7%	18.3%	17.1%
Other 4-year public	63,122	60,349	-4.4%	27.4%	24.2%
2-year public	73,971	77,694	5.0%	32.1%	31.1%
4-year private	51,111	68,870	34.7%	22.2%	27.6%
Missouri Total	230,474	249,497	8.3%		

Source: Statistical Abstract of Missouri, 1991 & 2001: IPEDS EF, Fall Enrollment Summary
IRP/LCB 06/02

In the fall of 1990, the University enrolled 42,270 undergraduates, or 18.3% of all undergraduates in Missouri. Although by Fall 2000 enrollment at the Columbia, Rolla, and St. Louis campuses decreased by 3.8%, 12.4% and 0.3%, respectively, the 24.2% increase in enrollment at the Kansas City campus enabled an overall 0.7% increase in undergraduate enrollment for UM. However, although UM slightly increased its undergraduate enrollment, by Fall 2000 it lost 1.2% of its market share, an indication that other Missouri institutions are becoming more competitive in attracting Missouri undergraduates.

From Fall 1990 to Fall 2000 there was a 4.4% decrease in the number of students enrolled at the other four-year public institutions and this resulted in a market share loss of 3.2%. If not for the 24.2% increase in enrollment at UMKC, the undergraduate enrollment at UM would have dropped also. However, the 24.2% increase at UMKC does not minimize the fact that the other UM campuses had losses ranging from 0.3% to 12.4%. While the overall undergraduate enrollment at four-year public institutions declined, the enrollment at two-year public and four-year private institutions increased by 5% and 34.7%, respectively. Furthermore, even though the undergraduate enrollment at two-year public institutions increased by 5%, two-year publics suffered a 1% loss in its share of the undergraduate market. With both four-year and two-year publics losing some of its undergraduate market share, these institutions lost students to Missouri four-year private institutions. Increasing undergraduate enrollment by 34.7%, four-year private institutions enrolled nearly 28% of all Missouri undergraduates in Fall 2000.

The following figure shows the enrollment trends of first-time freshmen from 1981 to 2000 and sheds insight into the restructuring of the undergraduate market from 1990 to 2000.

This figure shows that historically, more first-time freshmen choose to attend public four-year institutions than two-year public and four-year private institutions. This is consistent with the fact that four-year public institutions continue to enroll the largest number of undergraduates. However, further examination of this figure shows that while four-year public institutions continue to enroll the most first-time freshmen, they are doing so at a steadily decreasing rate. Beginning around 1991, total other four-year public institutions began to steadily lose its share of the first-time freshmen market. In addition, in 1981 UM enrolled nearly 24% of all first-time freshmen in Missouri and also began to lose its share of the first-time freshmen market, capturing an all-time low of 16% in 1992. Although UM has rebounded since 1992, by Fall 2000 it enrolled only 18% of all first-time freshmen in Missouri, a market loss of 6% over the past twenty years.

Nearly twenty years ago, Missouri four-year privates enrolled fewer first-time freshmen than UM and two-year public institutions. By Fall 2000, four-year privates enrolled over twenty-five percent of first-time freshmen, more first-time freshmen than UM and two-year public institutions. Furthermore, this figure shows that the gap between the market position of four-year privates and the other four-year public institutions is steadily decreasing. In addition, the steady increase in the market position of two-year public institutions since 1995 also contributes to the steady decrease in the number of first-time freshmen attending public four-year institutions.

What accounts for this shift in the enrollment patterns of first-time freshmen in Missouri? While the purpose of this report is not to specifically address this issue, several potential explanations are offered. One plausible explanation is the rising number of non-traditional students attending college that take advantage of the more flexible programs offered by four-year private colleges, i.e. evening and accelerated programs. Another plausible factor is that despite the rising costs to attend any type of institution, tuition at two-year public institutions remains several thousand dollars below public four-year institutions. In addition, even though the average amount to attend a four-year private institution is more than double the amount to attend a four-year public

institution, four-year private institutions offer a greater percentage of need based aid to their students than four-year public institutions. The following table illustrates this point.

Total Financial Aid Awarded by Type of Institution, FY 1990 to FY 2000

Type of Institution	1990			2000		
	Total Need-Based Awards	Total Awards	% Need-Based Awards	Total Need-Based Awards	Total Awards	% Need-Based Awards
Four-year public	147,470,319	206,807,794	71.3%	238,405,574	623,811,747	38.2%
two-year public	26,443,096	29,169,693	90.7%	49,639,955	69,588,873	71.3%
four-year private	151,086,673	220,546,714	68.5%	331,980,488	620,079,775	53.5%
Missouri Total	325,000,088	456,524,201	71.2%	620,026,017	1,313,480,395	47.2%

Source: Statistical Abstract of Missouri, 1991 & 2001: DHE 14, Student Financial Aid Awarded

This table shows that the percentage of need-based awards distributed by Missouri institutions have decreased overall from 71.2% in FY1990 to 47.2% in FY2000. However, in FY2000, four-year institutions offered the smallest percentage of need-based aid to its students (38.2%). Both two-year public and four-year private institutions offered substantially larger percentages of need-based awards, 71.3% and 53.5%, respectively. Since students have incentives to take advantage of educational opportunities at institutions where need-based aid is abundant, these facts are important in considering plausible reasons for the steady decrease in first-time students attending four-year public institutions.

Predominate Market Share of Undergraduate Enrollment by Type of Institution, 1990 and 2000

Source: Market Position Report, 2002: Appendix A

In the next major section of this report, an analysis of the undergraduate market by Missouri county origin in 1990 and 2000 is presented. But first, an interesting pattern that can shed insight on the Missouri higher education market is discussed. Earlier in this report it was illustrated and discussed that more undergraduates are opting to attend two-year public and four-year private institutions as opposed to four-year public institutions. The predominate market share of undergraduate enrollment by type of institution in 1990 and 2000, shown in the above figure, illustrates an important fact regarding how this enrollment trend is affecting the higher education market throughout the various geographical areas in Missouri. In both 1990 and 2000, undergraduates from the majority of Missouri counties enrolled in public four-year institutions at a higher rate than two-year public and four-year private institutions. However, as the maps above show, from 1990 to 2000 there was an increase in the number of Missouri counties where undergraduates from those counties enrolled in two-year public and four-year private institutions at higher rates than four-year public institutions.

By Fall 2000, more students opted to attend two-year public as opposed to four-year public institutions in several counties in the northern part of Missouri. In several counties in the central part of southern Missouri, more students opted to attend four-year private institutions as opposed to two-year public and four-year public institutions. Enrollment patterns such as these highlight the impact of the changing higher education landscape in which the University of Missouri competes. In various regions throughout the state, the University is competing to attract students that are opting to attend two-year public and four-year private institutions as opposed to four-year institutions.

Underrepresented Minorities at Missouri Institutions from 1990 to 2000

In considering an institution's overall competitiveness, an ever-increasing factor is the ability to achieve and maintain a diverse student enrollment. While there are many facets of diversity, including gender and economic, ethnic diversity continues to dominate the diversity issue in higher education. An examination of enrollment trends from 1990 to 2000 shows that the University of Missouri System improved in its enrollment of traditionally underrepresented minority undergraduates (African-Americans, American Indians, and Hispanics) but disparity remained between underrepresented minorities enrolled at the urban campuses when compared to UMR and UMC. In addition, by Fall 2000, UM System enrolled a larger percentage of underrepresented minorities than the total other four-year publics, but still enrolled a smaller percentage than the total two-year public and four-year private institutions.

Underrepresented Minority Enrollment at Missouri Institutions, Fall 1990 to Fall 2000

Fall 1990						
Institution Type	African-Americans	American Indians	Hispanics	Total Under-represented Minorities	Total Under-graduates	% Under-represented Minorities
UMC	768	60	153	981	18,763	5.2%
UMKC	467	34	115	616	6,514	9.5%
UMR	160	6	55	221	4,221	5.2%
UMSL	1,262	18	113	1,393	12,772	10.9%
UM System	2,657	118	436	3,211	42,270	7.6%
Other 4-year public	4,476	370	315	5,161	63,122	8.2%
2-year public	8,080	212	659	8,951	73,971	12.1%
4-year private	3,334	166	763	4,263	51,111	8.3%
Missouri Total	18,547	866	2,173	21,586	230,474	9.4%
Fall 2000						
Institution Type	African-Americans	American Indians	Hispanics	Total Under-represented Minorities	Total Under-graduates	% Under-represented Minorities
UMC	1,086	86	267	1,439	18,058	8.0%
UMKC	893	54	278	1,225	8,091	15.1%
UMR	149	22	47	218	3,698	5.9%
UMSL	1,481	36	162	1,679	12,737	13.2%
UM System	3,609	198	754	4,561	42,584	10.7%
Other 4-year public	4,594	522	683	5,799	60,349	9.6%
2-year public	9,146	420	1,244	10,810	77,694	13.9%
4-year private	6,089	390	2,328	8,807	68,870	12.8%
Missouri Total	23,438	1,530	5,009	29,977	249,497	12.0%

Source: Statistical Abstract of Missouri, 1991 & 2001: IPEDS EF, Fall Enrollment Summary
IRP/LCB 06/02

In 1990, there were 230,474 undergraduates enrolled in four-year public, two-year public and four-year private institutions in Missouri. Of these students, 21,586 (9.4%) were from traditionally underrepresented minority groups. Two-year public institutions enrolled the largest percentage of students from these ethnic groups (12.1%), followed by four-year private institutions (8.3%). Overall, 7.6% of the undergraduate enrollment at UM was comprised of underrepresented minorities, a percentage slightly behind the total other four-year publics.

Although the overall underrepresented minority enrollment at UM was 7.6%, these students were not distributed equally across the campuses. Over 63% of all underrepresented minority undergraduates in the UM System were enrolled at the St. Louis and Kansas City campuses. Over 9% of UMKC's and nearly 11% of UMSL's undergraduate enrollment was comprised of African-Americans, American Indians, and Hispanics. Underrepresented minorities represented 5.2% of undergraduates on both the Columbia and Rolla campuses. It is not surprising that the urban campuses enrolled a higher percentage of underrepresented minorities given the fact that the majority of underrepresented minorities live in urbanized areas, whereas a much smaller percentage live in non-urbanized areas.

By Fall 2000, the University of Missouri System was more ethnically diverse in that nearly 11% of its undergraduates came from underrepresented minority groups. The number of African-Americans, American Indians, and Hispanic undergraduates increased from 3,211 in the Fall of 1990 to 4,561 in Fall 2000, an increase of 42%. In addition, although the urban campuses still enrolled the highest percentages of underrepresented minorities, both UMR and UMC increased their percentages to 5.9% and 8%, respectively.

Even though disparities exist between the urban and non-urban campuses, this should not overshadow one important fact regarding the UM System's competitiveness in attracting underrepresented minorities in the state of Missouri. In both 1990 and 2000, UM enrolled nearly 15% of all African-American, American Indian, and Hispanic undergraduates that attended college in Missouri. This is a significant share of the market considering the other 50 institutions with which it competes. In addition, Fall 2000 the University of Missouri enrolled 44% of all underrepresented minorities that attended public four-year institutions. This made the University extremely competitive in attracting underrepresented minorities in the four-year public institution market. Therefore, in considering the University's record in attracting underrepresented minorities, even though disparities exist between the urban and non-urban campuses, the University is still very competitive in attracting students from the overall pool of underrepresented minorities that attend college in Missouri.

Undergraduate Market Share by Missouri County Origin

The following section is an analysis of the undergraduate market share by Missouri county origin for the University of Missouri System and its four campuses in 1990 and 2000. The purpose of this section is to show, by Missouri county, the competitiveness of the University when compared to other two and four-year institutions that enrolled students from the same county. In other words, of all the undergraduate students (2-year, 4-year public, and 4-year private) whose legal residence at the time of admission to college was county X, what percentage of those students enrolled at the University of Missouri? Beyond showing from which counties the University enrolls the largest number of students, an analysis of undergraduate market share by county origin can also shed insight on which geographic areas the University is most and least competitive in capturing undergraduate students.

Various counties throughout Missouri are referenced in this section and to serve as an aid in understanding this market share analysis, a map of Missouri counties is first presented along with a list of Missouri institutions and their geographical locations.

Missouri Counties

Missouri Institution Classifications

College or University	City	County
<i>University of Missouri Campuses</i>		
Columbia	Columbia	Boone
Kansas City	Kansas City	Jackson
Rolla	Rolla	Phelps

³ Blue River Community College has two campuses - Blue Springs and Independence

⁴ Originally named Heart of the Ozarks College, opened in 1991

⁵ Saint Charles County Community College opened in 1987

University of Missouri System

1990

2000

In 1990, the University of Missouri System enrolled 42,270 undergraduate students and 36,982 of these students (87%) were of Missouri origin. Almost eighty percent of these resident students came from ten counties (shaded): St. Louis, Jackson, St. Charles, Boone, St. Louis City, Clay, Jefferson, Cole, Greene and Phelps.

Although the University enrolled nearly 1,100 students from Greene and Phelps counties combined, it drew its largest

enrollments from three primary geographical regions, Central Missouri and the St. Louis and Kansas City metropolitan areas. Of these three regions, the University was most competitive in Central Missouri, enrolling more than 55% of all undergraduates that came from Boone County. While 2-year public universities dominated the market share in the St. Louis and Kansas City metropolitan areas, the University held a competitive edge when compared to other 4-year public colleges that enrolled students from St. Louis, Jackson and St. Charles counties.

By Fall 2000, the University enrolled 42,584 undergraduates and 36,373 of these students (85%) were of Missouri origin. The University improved its undergraduate market share in some parts of the state and had substantial losses in others. Nearly eighty percent of Missouri residents enrolled at the University came from St. Louis, Jackson, St. Charles, Boone, Clay, St. Louis City, Jefferson, Cass, Platte, and Cole counties (shaded), drawing its largest enrollments from the same geographic areas in 1990. The University maintained its market position in St. Louis County (29.4%) even though it enrolled nearly 1,300 less students than in 1990. The University slightly improved its market position in Jackson, Clay, and Jefferson counties and slightly lost its market position in St. Louis City, St. Charles, and Cole counties.

The University had its most significant loss in Boone county. Enrolling 23% less students since 1990, the University experienced a nearly 20% decrease in its market share of students originating from this county. Much of this loss can be attributed to a significant growth in the market shares of 4-year private and 2-year public institutions that enrolled students from Boone county, especially since the total of other four-year public institutions nearly maintained their

Source: Statistical Abstract of Missouri, 1991& 2001: Geographical Origin of Undergraduate Students

IRP/LCB 05/02

market position from 1990.

In both 1990 and 2000, the University of Missouri System enrolled undergraduate students from every county in the State of Missouri, although nearly 80% of its Missouri resident undergraduates came from three distinct geographic areas. However, as the maps show, the University was still very competitive in several of the counties where it enrolled significantly less students. For example, even in the northeastern part of the state where four-year private colleges enrolled the most students in 2000, the University still captured a double-digit percentage of the undergraduate market in all counties in that region.

An analysis of the market position of the University of Missouri System gives an overall picture of the University's competitiveness with other Missouri institutions, but sheds little insight into how the unique market position of each campus contributes to the University's overall competitiveness. The remainder of this section examines the market position of the Columbia, Kansas City, Rolla, and St. Louis campuses.

1990

To no surprise, the University of Missouri System's competitiveness in Central Missouri is due to the Columbia campus, which enrolled nearly 54% of all undergraduates that came from Boone County and had double-digit market share percentages in the surrounding counties.

In 1990, another geographic region where UMC was very competitive was in the northeastern part of the state. UMC boasted double-digit undergraduate market percentage shares in nearly every county in that region. UMC was less competitive in the lower half of the state with the exception of Pemiscot County in the bootheel, where it enrolled nearly 17 % of all undergraduates that came from that county.

IRP/LCB 05/02

counties, capturing 9.8% and 4.5% of the undergraduate market, respectively. However, it lost some of its market position slightly in Jackson, St. Charles, Clay, Green, and Platte counties and had significant loss in Central Missouri.

In Boone County alone, UMC lost nearly 20% of its market share since 1990. UMC enrolled only 1,660 students from Boone County in Fall 2000, representing a 25% decrease in students that enrolled in Fall 1990. Since the total other 4-year publics relatively maintained its market position from 1990, it is safe to say that most of UMC's market position loss in Boone County can be attributed to an increase in the percentage of students from Boone County that opted to attend 4-year private and 2-year public institutions. UMC also lost 4% of its market share in Cole County that also had an increase in the percentage of students that attended 4-year private and 2-year public institutions. With the exception of Osage County, UMC had significant market share losses in all of the counties adjacent to Boone County, where UMC is located. Some of the market share loss in Boone county can be

attributed to the more selective admissions criteria that was implemented in the mid-1990's, although this more than likely is not the sole factor given the overall enrollment trends throughout the state of Missouri.

Finally, although UMC still maintained double-digit market percentages in most of the northeastern Missouri counties, it lost some of its market position in all of those counties. In the southern half of the state, UMC had market gains in some counties, but overall had lost its market position in that part of the state.

University of Missouri-Kansas City

1990

2000

In the fall of 1990, the University of Missouri-Kansas City enrolled 6,514 undergraduates and 5,276 of these students (81%) were of Missouri origin. Fourteen percent (14%) of all undergraduate students of Missouri origin in the University of Missouri System were enrolled at UMKC. Almost 92% of these students (4,853) came from Jackson, Clay, Platte, Cass, St. Louis, Buchanan, Greene, Ray, Bates, and Lafayette counties (shaded). With the exception of Greene and St. Louis counties, UMKC drew its largest enrollments from the Kansas City metropolitan area.

Located in Jackson County, UMKC competes with several 2-year public, 4-year public, and 4-year private institutions in the Greater Kansas City metropolitan area. In 1990, nearly 54% of all undergraduates from Jackson county attended 2-year public institutions including Blue River, Longview, and Penn Valley Community Colleges. Still, UMKC was relatively competitive with the other 4-year public institutions that enrolled students from that county, capturing a market share nearly equal to their total percentage of the undergraduate market.

Unlike the Columbia campus that enrolled students from every county of the state, the Kansas City campus enrolled very few students (less than 10%) outside the Kansas City metropolitan area. Although it did enroll 147 students from St. Louis County, UMKC captured less than 1% of the undergraduate market share in the majority of the counties in Missouri.

In the fall of 2000, UMKC enrolled 8,091 undergraduates and 6,763

Source: Statistical Abstract of Missouri, 1991& 2001: Geographical Origin of Undergraduate Students

IRP/LCB 05/02

of these students (84%) were of Missouri origin. UMKC had a 28% increase in the number of undergraduate students of Missouri origin. Nearly 90% of these students (6,107) came from Jackson, Clay, Cass, Platte, St. Louis, Vernon, Barry, Ray, Johnson, and Boone counties (shaded).

UMKC significantly increased its market share in several of these counties including Jackson, Clay and Cass counties. For example, from 1990, UMKC nearly tripled the number of students that it enrolled from Cass County and increased its market share by over 12%. It also enrolled over 59% more students from Clay County and increased its market share in that county by 4%.

The smallest of UM System's two urban campuses, UMKC also became less regional and slightly more competitive throughout various parts of the state by the fall of 2000. In addition to significant increases in its market share in the Kansas City metropolitan area, UMKC had significant market share increases outside this geographic area. For example, in 1990 UMKC enrolled 9 students from Vernon County, capturing only 1.6% of

the undergraduate market share in that county. By Fall 2000, UMKC enrolled 116 students from Vernon county, increasing its market share by nearly 19%. Another example is Barry County where in 1990 UMKC enrolled only 5 students from there and captured less than 1% of the undergraduate market share. In 1990, UMKC enrolled 71 students from Barry County and captured over 9% of the market share from that county. These examples show that even though UMKC continues to enroll a significant amount of students from the Kansas City metropolitan area, since 1990 it has been able to expand its market share in other areas outside of its traditional boundaries.

University of Missouri-Rolla

1990

In the fall of 1990, the University of Missouri-Rolla enrolled 4,221 undergraduates and 3,487 of these students (83%) were of Missouri origin. These students represented less than 10% of the undergraduate Missouri resident students that enrolled at the University of Missouri System. Of the undergraduate resident students, UMR drew its largest enrollments from St. Louis, Phelps, Jackson, St. Charles, St. Louis City, Greene, Jefferson, Franklin, Cole, and Clay counties (shaded). Students coming from these counties represented nearly 68% of all Missouri resident students that enrolled at UMR. Located in Phelps County, UMR enrolled nearly 30% of all undergraduates from that county and significantly contributed to the UM System's 44% market share of undergraduate students from Phelps.

2000

Although UMR enrolled a large number of students from the St. Louis and Kansas City metropolitan areas, it did not capture a significant part of the undergraduate market in those regions. This was because of the dominance of the 2-year public institutions in those areas. However, given the location of the St. Louis and Kansas City campuses, combined with the large number of students from those areas that enrolled at the Columbia campus, UMR was able to accent the UM System's competitiveness in Missouri's two largest urban areas.

It is also important to highlight the fact that in 1990 UMR enrolled students from nearly every county in Missouri. However, as the 1990 map shows, as the distance from Phelps County increased,

Source: Statistical Abstract of Missouri, 1991& 2001: Geographical Origin of Undergraduate Students

IRP/LCB 05/02

UMR was generally less competitive in attracting students.

By the fall of 2000, the total undergraduate enrollment at UMR decreased by approximately 12%. Of the total 3,698 undergraduate students enrolled at UMR, 2,752 of these students (74%) were of Missouri origin. This represented a 21% decrease in the number of undergraduates of Missouri origin enrolled at UMR. UMR drew its largest enrollments from primarily the same counties that it did in 1990. However, it did not enroll as many students from those counties.

By 2000, UMR captured a significantly smaller percentage of the undergraduate market share in Phelps County. Enrolling only 15.4% of all undergraduates from that county, UMR also became less competitive in the surrounding counties. However, even though UMR enrolled fewer resident undergraduates and became less competitive in the counties where it drew its largest enrollments, it did increase its market position in various regions throughout Missouri.

For example, UMR had modest market position increases in nearly half of the counties in northern Missouri including Buchanan, Worth, Gentry, Clinton, Mercer, Grundy, Livingston, Clark, Lewis and Scotland counties. UMR also had modest market position increases in the southwestern counties of Barton, Jasper, Newton, and McDonald. Finally, UMR increased its market position slightly in the southeastern counties of Iron, Reynolds, Carter, Butler, and Cape Girardeau.

University of Missouri-St. Louis

1990

2000

In the fall of 1990, the University of Missouri-St. Louis enrolled 12,772 undergraduates and 12,127 of these students

(95%) were of Missouri origin. Of the four University of Missouri campuses, the St. Louis campus enrolled the largest percentage of Missouri resident undergraduates. Also, UMSL was the most regional of the four campuses, meaning that it drew most of its students from a less dispersed geographical area.

In 1990, UMSL drew 99% of its resident undergraduate enrollment from St. Louis, St. Charles, St. Louis City, Jefferson, Franklin, Lincoln, Warren, St. Francois, Boone, and Phelps counties (shaded). With the exception of Boone and Phelps counties, the majority of these students came from the St. Louis metropolitan area. Given the predominance of 2-year public institutions in the St. Louis metropolitan region, UMSL was relatively competitive with the other 4-year public and private institutions in some of the counties and was less competitive in others.

Of all the undergraduates from St. Louis County, UMSL enrolled almost half that attended a 4-year public institution and enrolled more students than the total 4-year private institutions combined. Excluding the students from St. Charles County that attended other University of Missouri campuses, UMSL enrolled nearly the same number of students that enrolled in the total other 4-year institutions combined. In St. Louis City, UMSL captured nearly 10% of the undergraduate market, which was a significant share given over half of undergraduates from St. Louis City attended 2-year public institutions. However, UMSL was less competitive in Jefferson, Franklin, Lincoln, Warren, St. Francois, Boone, and Phelps counties,

Source: Statistical Abstract of Missouri, 1991& 2001: Geographical Origin of Undergraduate Students

IRP/LCB 05/02

capturing no more than 5% of the undergraduate market in those counties.

In the fall of 2000, UMSL enrolled 12,737 undergraduates, and 11,808 of these students (93%) were of Missouri origin. Of the four University of Missouri campuses, UMSL still enrolled the largest percentage of students of Missouri origin and was still the most regional campus. Nearly 99% of its resident undergraduate enrollment came from St. Louis, St. Charles, St. Louis City, Jefferson, Franklin, Lincoln, Warren, St. Francois, Ste. Genevieve, and Crawford counties (shaded).

By Fall 2000, UMSL improved its market position in some areas of the St. Louis metropolitan area, and lost some of its market share in others. UMSL slightly lost its market position in St. Louis, St. Charles, and Franklin counties, and maintained its market position in St. Louis City. However, UMSL became slightly more competitive in Jefferson, Lincoln, Warren, and St. Francois counties.

This section provided an analysis of the 1990 and 2000 market position of the University of Missouri System and its four campuses. This analysis showed that although the University of Missouri System enrolls undergraduates from every part of the state of Missouri, the enrollment patterns on each campus make a unique contribution to the overall competitiveness of the University. For example, the University's competitiveness in the St. Louis and Kansas City metropolitan areas is highly determined by the enrollment patterns of its two urban campuses, even though the Columbia and Rolla campuses enroll a significant number of students from those areas. On the other hand, outside of the St. Louis and Kansas City metropolitan areas, the University's competitiveness throughout the rest of the state is highly determined by the enrollment patterns of the Columbia and Rolla campuses, which both enroll students from nearly every county in Missouri.

Summary

This report examined the University of Missouri System's competitiveness in attracting undergraduate students from Missouri when compared to two-year public, four-year private, and other four-year public institutions. Factors such as Missouri high school graduation trends, first-time freshmen college preference trends, and changes in the number of Missouri residents attending college will continue to impact on undergraduate enrollment patterns at the University of Missouri System and the University's competitiveness. Because the magnitude of these factors are not uniformly distributed across the state of Missouri and have different impacts on the enrollment patterns of the four campuses due to their unique geographical locations, it is important not to view the University of Missouri as having one overall "position" in the higher education market. Rather, in considering the market position of the University, it is important to examine how each of the four campuses makes a unique contribution to its overall competitiveness.

The most significant finding of this research was that there was no single common factor that contributed to the changes in the market position of the four campuses. For example, from 1990 to 2000 all campuses except UMKC had various magnitudes of undergraduate enrollment loss from 2.7% at UMSL to 12% at UMR. UMKC increased its undergraduate enrollment by 24% and was the only campus that increased its percentage of undergraduate students of Missouri origin. In addition, even though UMC, UMR, and UMSL all enrolled fewer students from Missouri, the decrease in these percentages varied widely from 2.6% at UMSL to 21% at UMR. Also, changes in enrollment patterns in two-year, four-year private and other four-year publics varied by geographical location and influenced campus market positions differently. For example, most of UMC's market loss in Boone county can be attributed to losing students it would have enrolled to four-year private and two-year public institutions, since the total other four-year publics virtually maintained its market position in Boone County. On the other hand, in Phelps county, not only did UMR have a significant market loss, but the total other 4-year publics enrolling students from that county also significantly loss its market position to four-year private and two-year public institutions. These examples show the complexity of understanding what influences the University of Missouri's competitiveness across the state of Missouri, reiterating the point that the University does not have an overall "position" in the higher education market, but rather varying levels of competitiveness throughout the state.

Although this report is primarily descriptive in examining the University of Missouri's competitiveness in the undergraduate student market, it does raise several interesting questions for future investigation that could help to better explain factors that influence the University's ability to attract undergraduates from the various geographical regions throughout the state. For example, by Fall 2000, why did so many undergraduates from Boone County opt to attend four-year private and two-year public institutions, contributing to UMC's 20% market loss in Boone County? Was it because in addition to the changing first-time freshmen enrollment trends throughout Missouri, in the mid-1990's UMC became more selective in its admissions process? Although of the four campuses Rolla has the smallest percentage of students of Missouri origin, why has it still been very successful in attracting students from nearly every county in the state? How does the University compare to other Missouri four-year publics in the percentage of need-based aid it offers to its undergraduates? By doing further

investigation on these types of questions an understanding of the University of Missouri's competitiveness will become more clear.

The remainder of this report is comprised of two appendices that compare enrollment and market share data for each of the 115 Missouri counties in 1990 and 2000. Appendix A is a summary of market share data of total undergraduate enrollment by Missouri county origin. Appendix A can be used in several ways including determining for a specific county which 4-year publics compete with the University of Missouri campuses in attracting students. In conjunction with the Missouri map included in this report, Appendix A can also be used to examine a particular undergraduate market area in more detail, i.e., northeast, southeast, southwest, or central Missouri.

Because undergraduate market share is reported as a percentage of enrollment and not actual enrollment numbers, Appendix B, a summary of total undergraduate enrollment by Missouri county origin, can be used to provide further information regarding the University's competitiveness in a specific county. For example, according to Appendix A, by Fall 2000, the UM system increased its market position in Adair County by only 5.4%, even though according to Appendix B it enrolled nearly 20% more students. However, a 5.4% market position increase was great for UM considering the total number of undergraduates from that county decreased by nearly 28%.
